

Being a curious amateur radio operator, We (NX9T, K4NYS, N4XD, and myself K4HA) drove to the site of a test BPL system in Fuquay Varina NC, about 5 miles from my house. I have an HF station in my car, and went there to hear this new interference. I am horrified that the FCC is allowing such harmful interference to continue unrestricted. I was talking to another amateur on 28.430 Mhz 2 miles from the test site and had a very hard time listening to the conversation due to the signals being generated by the BPL system. During this contact we video taped all the information and is available for viewing if helpful.

I pray that in the event of a disaster, natural or other, the Amateur Radio community will be able to assist like it has in the past, and not be destroyed by this interference.

Thank You
